

GOTO MCP SERVER PRIVACY POLICY

Effective Date: September 23, 2026

The GoTo MCP server (the "Connector") allows AI assistants to interact with the GoTo Services made available through it on behalf of an authenticated user. The GoTo Services accessible through the Connector are identified in the Connector's documentation, and the practices described below apply to each of them. This policy describes what data the Connector processes, how that data is used, and how long it is retained. It supplements GoTo's main Privacy Policy, available at <https://www.goto.com/company/legal/privacy/us>, which controls for any practice not addressed here. Access to GoTo's developer APIs outside the Connector is governed by GoTo's Developer API Terms of Use at <https://www.goto.com/company/legal/api-terms>.

1. **What the Connector collects.** The Connector collects and processes:

- **Connection and Authentication Information (OAuth Data):** OAuth Data access and refresh tokens issued when you authorize the Connector, and the GoTo account identifier required to route a request to the correct account, together with any additional identifier (such as email address) that a supporting GoTo backend service requires in order to fulfill the request. This connection data is handled under GoTo's general Privacy Policy, for example, to secure our services, and our customer agreements.
- **Tool Call Parameters and Payload:** The structured parameters and payload data submitted as part of a tool call is determined by the customer who uses the Connector. The customer's use of the Connector is subject to GoTo's Developer API terms. GoTo processes the information our customers provide us with to fulfill the requested Connector functionality and is subject to GoTo's Developer API Terms.

The Connector does not receive or process your conversation history or the AI assistant's prompt context. It receives only the specific parameters necessary to execute the applicable Connector request.

2. How that data is used. OAuth Data is processed to authenticate you, execute the requested tool call against your GoTo Services account, and return the response to the AI assistant. We may review it in the context of providing our services to our customers, such as for security purposes or for logging.

3. Processing and retention. Requests are processed in real time, and request and response data is held in memory only for as long as the call requires. Server-side operational logs, such as request metadata, timestamps, error codes, and the input parameters supplied with a tool call, but not full request or response payloads, are retained in accordance with GoTo's standard backend log retention configuration, currently 90 days, after which they are automatically purged. OAuth access tokens are retained only for their validity period; refresh tokens are deleted when you revoke access or disconnect the Connector.

4. No advertising or AI model training. Data submitted through the Connector is not sold or shared, and is not used for advertising, targeted or cross-context behavioral advertising, marketing, or AI model training.

5. Third-party sharing. Data submitted through the Connector is disclosed by GoTo only to GoTo affiliates and to subprocessors engaged under appropriate contractual safeguards, in each case as necessary to operate the Connector and deliver the requested GoTo Services, and as required by applicable law or valid legal process. In addition, the customer may direct that data be disclosed to recipients of their choosing. Information about GoTo's subprocessors, security practices, and certifications is available in its Trust Center at <https://www.goto.com/company/trust>.

6. Access to your data. GoTo accesses Connector Data only for legitimate business purposes or with your affirmative authorization. For example, GoTo may review the information to investigate abuse, fraud, or a security incident or to resolve a support request; where legal compliance requires it; or where the data has been aggregated or anonymized so that it no longer identifies you or any third party.

7. Your choices. You may disconnect the Connector at any time through your AI assistant's settings. GoTo processes Connector data on behalf of its Customers. If you are an end user of a Customer's account, please direct access, correction, deletion, and portability requests to the Customer that administers your account. Customer administrators may submit requests through GoTo Care.

8. Contact and updates. For support inquiries, contact our customer care team at support.goto.com. For privacy questions, contact privacy@goto.com. To report a security vulnerability, contact security@goto.com. GoTo may update this policy from time to time and will make the revised policy available at this location with an updated effective date.
